

Diameter:	1" 1-1/2" 2" 2-1/2" 3"
Face Width:	1/2" 5/8" 3/4" 1" 1-1/2" 2"
Backing Plate:	1/4" 1/4"-20 Threaded

Nearly all Flap Wheels are X-weight aluminum oxide cotton cloth. Ceramic and zirconia are NOT used since the pressure used in grinding with a flap wheel does not allow for increased performance compared to aluminum oxide. J-Weight cloth for increased flexibility and silicon carbide for special applications in aerospace are exceptions to only X-weight aluminum oxide being used in Flap Wheels.

Product Description

Flap Wheels are designed for light finishing and deburring. The flap design allows the wheel to contour around the work piece and smooth the surface. As the flap wears away new abrasive grain is exposed and the wheel continues to cut. Small Mounted Flap Wheels allow access to tight and awkward surfaces such as inside angles and internal pipe surfaces.
